The function of this program is to print bit pattern of a number.

**Define (input)**
- (a) An integer (N), define the number format (1=int, 2=float, 3=double).
- (b) A number (X), print bit pattern of this number.
- (c) Use stdin to input (scanf).

**Define (output)**
Print the bit pattern of the number.

Ex:
N=1, X=-1
output: 11111111111111111111111111111111
